

IronBus publish path: ack is returned only after the covering fdatasync

Notes:

- Single writer per active segment; many producers fan in through the MPSC queue.
- Group commit coalesces whatever arrived during the previous sync (natural batching under load).
- On a fatal fsync error the writer freezes read-only and no further PUB is acked (fsyncgate discipline).
- durability mode none/interval changes WHEN ack returns; fdatasync-before-ack is the default.
